

Opti M Cotton

Tape option: **Stable**

Zip models and functions

M4Y CC; CE

M6Y / M60 CC; CE

Main uses

RFD apparel

Benefits

Opti M Cotton Stable has a new type of tape with perfect colour uptake, provides smooth slider running and improves the strength of the zip.

Recommendations

Before proceeding to bulk production, Coats Opti recommends that you run tests and production trials on all zip uses/applications in order to verify that the product meets the end user requirements as well as the demands of internal processing conditions.

Coats Opti supports customers with advice on individual applications when requested. If you have any questions or concerns, please contact us.

Why Opti M Cotton Stable?

Zips with cotton tapes are used for post-dyed apparel. Very high temperature, mechanical treatment and aggressive chemicals lead to fabric and zip tape shrinkage sometimes reaching 15 - 20%. Customers are dissatisfied when there is a humpy fastener and the slider is difficult to move.

The lateral strength is improved which helps the grip and stop movement of yarns between metal teeth. Tape design buffers the shock from fabric shrinkage and spares the movement of the slider along the metal elements.

Description

Opti M Cotton Stable is a zip made from 100% mercerized cotton yarns and ready to withstand numerous wet processes. Its tape is designed to shrink while protecting the teeth and the slider from excessive quantities of yarns.

Thanks to this product:

- Humpy zips and difficult slider movement are a thing of the past.
- There is excellent colour match between the garment and zip tape.
- And most important the quality of the final product is not compromised.
