

Opti RT0 (#3 coil)

Zip models and functions

RT0 CE and reversed
RT0 OE and reversed

Main uses

Active wear jackets (light weight)
Active wear sweatshirts (light weight)
Children's wear (light weight)
Baby wear

Benefits

Opti RT0 is the perfect solution for light weight active wear. Flexible, safe and aesthetically crafted, it is the best zip for nylon jackets or sweatshirts.

Why Coats Opti RT0?

Our competitors use moulded ends as opposed to our metal pin & box. As a result, the competitors' products have the following drawbacks: (1) larger injection moulded area calling for a wider tape, resulting in the stitches being 4 to 6 mm further away from the teeth (Image 2). This leads to a weaker zip-to-garment attachment strength and (2) the wider tape is more visible in the garment, resulting in the slightest colour mismatches between the tape and the garment obvious.

RT0 is safer for children

Our competitors' moulded end zips have a thinner layer of plastic over the tape and are prone to split and fracture. This can scratch the skin and can chip off; the chipped piece may end up being swallowed by children. There is no injection moulding in our metal pin & box configuration which eliminates such a risk.

Description

Opti RT0 (#3 coil) is a light weight zip, available in regular and reversed configurations.

Compared to the plastic moulded ends, the metal pin & box (Image 1) in our RT0 zips are ideal for baby wear due to the reduced risk of choking hazard.
