

S64

The grand invisible

Correct zip length selection: A concealed zip gives an effective opening approximately 2.5cm less than its length. Thus for a 20cm opening a 23cm zip is required.

Main uses

Dresses

Skirts

Trousers

Pockets

Blouses

Home furnishing (pillows)

Description

Opti S64 is the wider invisible zip developed for use with heavy fabrics. The textile tape is woven from polyester. Top and bottom stops are welded.

Available with enameled and plated sliders and pullers.

Benefits

Opti S64 invisible is the zip of choice for heavy fabrics with minimum risk of damage due to the application of bigger force during opening and closing the zip.

Sewing

The effective insertion of an invisible zip is critical to the appearance and durability of the final garment.

We recommend the usage of special presser feet to apply the zip in place (see image1) .

Care should be taken to allow room for slider running:

- through the waistband style in trousers or skirts;
- in dresses with side seams / ruffles / layers or pleats joining at the seam position of the zip;
- where the pocket seam joins midway along the zip seam.
