

Opti S Stick-on

Bi-adhesive tape

Zip models and functions

S60 CE

S60 CC

Main uses

Footwear

Leather goods and accessories

Luggage and travel goods

Benefits

Opti S Stick-on has a bi-adhesive tape which makes the positioning of the zip more easy, quick and clean. By saving time it increases the productivity as well as the quality of the final product.

Adding a zip to footwear

To position a zip to some applications is a time-consuming activity. Before sewing the zip to the material, the zip needs to be fixed with glue. Efforts, time and patience are needed for this operation. First the zip should be fixed properly so that the leather is not in the path of the slider when opening and closing the zip. The quantity of adhesive and its application are also important. It should be cautiously applied manually without affecting the zip teeth and slider.

The process of using glue in the workplace can be untidy and can be unpleasant for workers handling with it on a daily basis. In some cases adhesives can also spread to the zip teeth and components. Any contamination should be quickly removed to prevent any potential problems with the final product.

Why Opti S Stick-on?

Opti S Stick-on helps positioning the zip with low pressure thanks to the bi-adhesive tape which is already applied on the zip. It eases the material fixing and stitching while protecting the teeth and slider from excessive quantities of adhesive. Thanks to this product:

- The workplace remains clean with no contamination of the workplace from using adhesives.
- The whole operation of positioning the zip is much easier and quicker and thus the **productivity is increased.**
- And most important the **quality** of the final product is not compromised.
