

S60 FP (foot print)

Sliders with solid body

Auto-lock

Flat-lock

Zip models:

S60 auto-lock slider

S60 flat-lock slider

Main uses

Footwear

Benefits

Exceptionally strong sliders, meeting all footwear standards and requirements with force against slider mouth opening, reaching between 300 and 350N.

Why stronger sliders?

According to our experience and study, we found that the slider stands the risk of being damaged during footwear manufacturing due to poor practices like direct hammering and improper last removal.

Also, the shoe design or material used and workmanship – like soft and narrow zip guard and lack of allowance for slider movement – may indirectly cause the slider to deform when used by the consumer.

We have developed a range of strengthened sliders especially for footwear application to minimise the slider damage due to potential physical abuse.

What is the difference?

Besides the slider's reinforced interior design, the back shield of slider body is strengthened in thickness and results in a 50% increase in the force (between 300 and 350N) required to cause the slider mouth to open.

These sliders can be distinguished by the distinctive footprints logo at the back of the plate, where the Opti brand is positioned.
