

Forget all issues!

Just clip down and go
active with Opti S Gym

Sports bras with front zips are very comfortable for dressing on/off. But do you know the zip can burst or slider can slide down the chain and open if the zip is not closed properly.

Have you been annoyed by dangling puller while jogging? The sound can indeed be off-putting and the asynchronous motion of the puller can throw your stride off balance.

How irritating is it to hear the puller clinking with every step you take or every move you make while doing sports or just walking.

Does it drive you crazy when someone's backpack is making all sorts of noise on the trail. Or even worse - when your backpack is clanking and bouncing.

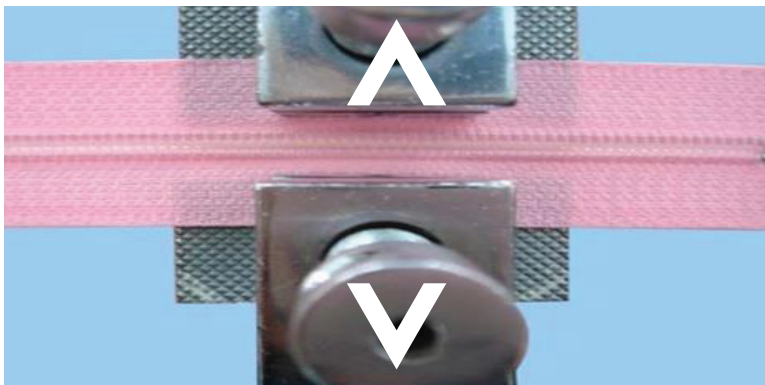

Discover Opti S Gym Concept

Puller clips down and is preventing it from dangling, bouncing and tangling.

Even when puller is not clipped the slider will not slip down due to its auto-lock function.

S-technology reduces the risk of zip bursting due to its intrinsic higher lateral strength.

S-technology brings unique abrasion resistance due to the fact there are no sewing threads used to attach the teeth to the zip tape.

Opti S Gym is available in reversed tape option for a flatter and more pleasant and elegant look of the final product.

Use your logo or emblem to make the Opti S Gym entirely yours. Puller customization is also possible.
